## Appendix: ConfigGammaLut():

請修改main/src/pipeline\_program.c 中的ConfigGammaLut():

```
void ConfigGammaLut(u32 width , u32 height)
{
    u32 count;
    Xil_Out32((VGANMALUT_BASE + 0x10), width );
    Xil_Out32((VGANMALUT_BASE + 0x18), height );
    Xil_Out32((VGANMALUT_BASE + 0x20), 0x0 );
    for(count-0; count < 0x200; count ++ 2)
    {
        Xil_Out16((VGANMALUT_BASE + 0x800 + count), (u16)(count/2));
    }
    for(count-0; count < 0x200; count ++ 2)
    {
        Xil_Out16((VGANMALUT_BASE + 0x1000 + count), (u16)(count/3));
    }
    for(count-0; count < 0x200; count += 2)
    {
        Xil_Out16((VGANMALUT_BASE + 0x1000 + count), (u16)(count/2));
    }
    Xil_Out32((VGANMALUT_BASE + 0x1000 + count), (u16)(count/2));
}</pre>
```

# 幾頭 特性 偏 编 調 **NARLabs**Appendix: Gamma Correction

### Appendix: ConfigCSC();

**NARLabs** 

```
main/src/pipeline program.c中的ConfigCSC():
          void ConfigCSC(u32 width , u32 height)
               Xil_Out32((VPROCSSCSC_BASE + 0x0010), 0x0 );
               Xil Out32((VPROCSSCSC BASE + 0x0018), 0x0
               Xil_Out32((VPROCSSCSC_BASE + 0x0050), 0x3E98); // K11 R 3.91
               Xil Out32((VPROCSSCSC BASE + 0x0058), 0x0
               Xil Out32((VPROCSSCSC BASE + 0x0060), 0x0
                Xil Out32((VPROCSSCSC BASE + 0x0068), 0x0
                Xil_Out32((VPROCSSCSC_BASE + 0x0070), 0x3999); // K22 G 3.6
                X11_Out32((VPROCSSCSC_BASE + 0x0078), 0x0
               Xil Out32((VPROCSSCSC_BASE + 0x0080), 0x0
                Xil Out32((VPROCSSCSC BASE + 0x0088), 0x0
               Xil_Out32((VPROCSSCSC_BASE + 0x0090), 0x4800); // K33
                X11 OUT32((VPROCSSCSC BASE + 0x0098), 0x0
               Xil_Out32((VPROCSSCSC_BASE + 0x00a0), 0x0
               Xil_Out32((VPROCSSCSC_BASE + 0x00a8), 0x0
                                                          ); //HwReg_BOffset_V
               Xil Out32((VPROCSSCSC_BASE + 0x00b0), 0x0
                                                          ); //HwReg_ClampMin_V
               Xil_Out32((VPROCSSCSC_BASE + 0x00b8), 0xff ); //HwReg_ClipMax_V
               Xil_Out32((VPROCSSCSC_BASE + 0x0020), width );
               Xil Out32((VPROCSSCSC BASE + 0x0028), height );
               Xil Out32((VPROCSSCSC BASE + 0x0000), 0x81 );
```
